

Ellison Creek Watershed Project Update – August 2010

Photo by Deborah Logan-NRCS

The Ellison Creek Watershed Project consists of construction of a concrete weir and pool in a badly eroding stream segment. This will improve stream health and protect agricultural lands by reducing erosion and sediment and will stabilize county maintained bridges. The funding for this project, at approximately \$1,875,000, is through the American Recovery and Reinvestment Act of 2009.
